SUMMARY

Full Stack Developer with 4+ years of experience building and shipping end-to-end web applications. I have worked with Node.js, REST APIs, real-time systems, and database design, and I've built and deployed production frontends with React. I'm comfortable owning a feature from API to UI. I can work across the stack without any issue.

EXPERIENCE

Full Stack Developer

October 2024 – Present

Turing

Remote

- Built and optimized REST APIs handling thousands of daily requests, bringing average response time down by 15–25%
- Debugged and fixed critical production issues, reducing downtime and keeping things running reliably
- Eliminated redundant API calls and optimized queries across PostgreSQL and DynamoDB, improving backend throughput
- Used DynamoDB for high-read data like sessions and activity logs, cutting read latency on those endpoints noticeably
- Worked closely with frontend teams on API contracts and integration to keep data flow clean on both ends
- Pitched in on React UI work when needed – fixed UI bugs, helped shape API responses to fit frontend state

Full Stack Developer

June 2022 – September 2024

Lystloc

Remote

- Built and scaled backend services for a real-time location tracking platform serving 10,000+ concurrent users
- Designed and implemented 20+ REST APIs using Node.js (Express, NestJS), improving system modularity
- Optimized database queries and schema design across MongoDB and PostgreSQL, reducing response times by 25–40%
- Built real-time location updates and push events using WebSockets on both the backend and wired them into the frontend map views
- Deployed and managed serverless functions with AWS Lambda for event-driven workloads
- Containerized services with Docker and managed deployments on Kubernetes, keeping things stable across environments

Full Stack Developer (Part-time Contract)

January 2022 – June 2022

Carvita Technology

Pune, Maharashtra

- Built backend APIs with Node.js and Express for core app features from scratch
- Identified and fixed production bugs, improving system stability and reducing recurring issues
- Built and integrated React UI components with backend APIs; handled state management with Redux
- Shaped API responses and managed frontend state to keep the UI fast and consistent

PROJECTS

Wiles and Rues – E-commerce Platform | *MERN Stack, Redis, Stripe, AWS*

- Built a production-ready MERN e-commerce platform with auth, payments, admin dashboard, and order management
- Integrated Stripe payments, Google OAuth login, Cloudinary image uploads, and JWT-based role access control
- Built REST APIs with Express and MongoDB covering products, orders, reviews, blogs, and analytics
- Implemented Redux Toolkit for state management, protected routes, and role-based admin access on the frontend
- Designed the frontend with React, Vite, and Tailwind CSS; added dashboard charts using Chart.js
- Implemented Redis caching for frequently accessed data to reduce DB load
- Live Demo: e-commerce-project-zeta-ten.vercel.app

Expense Tracker | *Node.js, Express, MySQL, Sequelize, React*

- Built a full-stack expense management app with secure auth and a clean REST API layer
- Designed normalized MySQL schema using Sequelize ORM with optimized queries for financial records
- Built the React frontend with API integration, responsive layout, and real-time expense summaries

EDUCATION

Master of Science in Computer Science <i>AISC</i>	Aug 2020 – May 2022 <i>Pune, Maharashtra</i>
Bachelor of Science in Computer Science <i>AISC</i>	May 2017 – May 2020 <i>Pune, Maharashtra</i>

TECHNICAL SKILLS

Languages: JavaScript, TypeScript	
Backend: Node.js, Express, NestJS	
Frontend: React, Nextjs, Redux, Vite, Tailwind CSS	
Databases: MongoDB, DynamoDB, MySQL, PostgreSQL, Redis	
Cloud & DevOps: AWS (Lambda, EC2), Docker, Kubernetes	
Tools: Git	
Concepts: REST API Design, Database Optimization, Authentication, Real-time Systems, Microservices, Data Structures & Algorithms
