EDUCATION

AISC

Masters in Computer Science

Pune, Maharashtra

Aug. 2020 – May 2022

AISC

Bachelors in Computer Science

Pune, Maharashtra

May. 2017 – May 2020

EXPERIENCE

Full Stack Developer

Turing

October 2024 – Present

Remote

- Engineered and optimized REST APIs handling thousands of daily requests, improving response time by 15–25%
- Resolved critical production issues, reducing downtime and improving system reliability
- Improved backend performance by eliminating redundant API calls and optimizing database queries
- Integrated frontend with backend APIs, ensuring scalable and efficient data flow

Full Stack Developer

Lystloc

June. 2022 – September. 2024

Remote

- Built and scaled high-availability backend services for a real-time location tracking platform
- Implemented 20+ REST APIs using Node.js (Express, NestJS), improving system modularity
- Optimized database queries and schema design, reducing response time by 25–40%
- Designed real-time features using WebSockets and deployed serverless solutions with AWS Lambda

Full Stack Developer

Carvita Technology - Contract

January 2022 – June 2022

Pune, Maharashtra

- Implemented backend APIs using Node.js and Express for core application features
- Identified and fixed bugs, improving system reliability and reducing production issues
- Built and integrated React-based UI components with backend services
- Managed frontend state and API responses to improve performance and user experience

PROJECTS

Expense Tracker | Node.js, Express, React, MySQL

June 2023 – August 2023

- Developed a full-stack expense management system using Node.js, Express, React, and MySQL
- Built responsive UI components in React and integrated them with REST APIs
- Implemented secure authentication and backend APIs for managing financial transactions
- Designed scalable database schema using Sequelize ORM and optimized query performance

Chat Application | Node.js, Express, React, MongoDB

January 2023 – March 2023

- Developed a real-time chat application using Node.js, Express, Socket.io, and MongoDB
- Implemented low-latency group messaging using WebSockets
- Designed scalable backend to handle concurrent users efficiently
- Integrated frontend with real-time APIs for seamless messaging experience

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Backend: Node.js, Express, NestJS

Frontend: React, Tailwind CSS

Databases: MongoDB, MySQL, PostgreSQL, Redis

Cloud & DevOps: AWS (Lambda, EC2), Docker, Kubernetes

Tools: Git

Concepts: Data Structures and Algorithms, API Design, Authentication, Microservices, Real-time Systems
